Re: Moore-Trosper Construction Company

To Whom It May Concern:

I have had the pleasure of working with Moore-Trosper since 1979 when I worked with Harold Moore and Jim Trosper at their former employer Charles Featherly Construction Company. I had just graduated from the University of Michigan and Harold and Jim became my mentors, teaching me valuable information they don't teach in college.

When CFCC closed and Moore-Trosper was formed, I was often retained to do drafting for their projects. Since starting my firm in 1990, we teamed up on several sizable projects including:

- Michigan Packaging Company
 - Plant 1, Eaton Rapids corporate offices, lunchroom, storage building.
 - Plant 3, Mason, Michigan. 250,000 sf production facility, 36,000 sf corporate offices and 17,000 sf truck maintenance building.
- McFadden Bus Garage, Eaton Rapids
- Clinic renovations for Sparrow Health System.

I recommend MTCC be involved in every phase of your project. In the design phase, they have the experience to contribute to the value engineering. In the bidding phase, they possess both the clout and respect of sub-contractors to get you good prices and to put together a working team. During construction, the project managers are responsible to keep field reports and document changes while keeping things moving by careful coordination of the sub-trades. They also diligently follow proper safety procedures and regulations on the site. The end result is a building with excellent attention to details that you can be proud of.

Sincerely yours,
